

## Finishing information for Commercial and Residential Overhead Doors

- Doors made with Vinyl Composite Technology can be left natural white and installed as-is.
- American Legends Series doors are only available in white. Attempts to finish an American Legends door outside the factory may void your warranty.
- All other series can be finished at our factory with our heat reflective, molecularly-bonded protective coating, available in a rainbow of colors, *including black*. Custom color matching is available - Please consult the factory to explore your options.<sup>1</sup>
- Any paint finish done outside of the factory is done at the customer's risk and will void the warranty if we deem there is any damage to the door resulting from the finish/paint or application. Finishing instructions are offered as information only and in no way commit Fimbel ADS to the outcome. Please see our Limited Lifetime Warranty and Finishing Information documents on the [Downloads](#) page for complete details.<sup>2</sup>
- Under no circumstances can our vinyl door products be field stained.<sup>3</sup>

### Standard Factory Applied Paint Colors:

<sup>1</sup> Factory applied coatings on VCT products carry a 15 year warranty, available on our [Downloads](#) page.

<sup>2</sup> There are many paint manufacturers that claim their paint is suitable for use with vinyl. Many paints we have tested will indeed coat your vinyl carriage house door, but are not heat-reflective. The sun's heat is absorbed and magnified by standard color pigmentation, and is intense enough to distort the face of your door. This is not exclusive to vinyl carriage house doors, but vinyl siding and windows as well.
