

Doors That Operate Efficiently Help Save Lives

The Program is designed to assist facility owners and tenants in their legal obligation to maintain safe and code compliant fire and smoke rated openings. National Fire Protection Association (NFPA) standards require building owners to have rolling, sliding, and swinging fire doors inspected and tested annually, and to maintain written documentation of such inspections. Defective, damaged, or non-functional fire doors may subject building owners and managers to catastrophic losses and increased liability.

CERTIFIED FIRE DOOR COMPLIANCE PROGRAM

Our technicians are Rolling Steel Fire Door Certified by the Institute of Door Dealer Education and Accreditation.

Certified Fire Door Compliance Program® Inspection Checklist:

- ✓ No holes or breaks in door or frame.
- ✓ Glazing and glass kit/glass beads are intact and securely fastened.
- ✓ Door, frame, and hardware are in proper working order.
- ✓ No missing or broken parts.
- ✓ Door clearances are within allowable limits.
- ✓ Door closer/spring hinges are operational and door is self-closing.
- ✓ Coordinator ensures that door leaves close in proper sequence (pairs only).
- ✓ Door is self-latching in the closed position.
- ✓ Opening is not equipped with auxiliary hardware items, which interfere with operation.
- ✓ No field modifications have been performed that void the label.
- ✓ Gasketing and edge seals, where required, are present, continuous, and of the proper type for a fire door.
